

BEFORE YOU SKIP TO THE LAST PAGE LIKE YOU ALWAYS DO

This is not another “trust us, we’re a great team” deck.

It has a villain (legacy healthcare software), two heroes, one rubber duck, and a legal verdict you'll actually want to read.

01 · The problem

02 · The dream team

03 · 9,999 bugs, defeated

04 · A verdict on Anvega

05 · The ask

KEEP GOING — IT GETS BETTER ↓

Amulaya × Appic Softwares

Building the future of healthcare technology —
one honest product decision at a time.

Healthcare strategy

Product engineering

AI · Mobile · Cloud · Design

TWO TEAMS.
ONE PATIENT EXPERIENCE
WORTH CARING ABOUT.

Every great product starts with a conversation, a whiteboard, and way too many sticky notes.

STEP ONE

An idea

Usually said out loud before anyone believes it's real.

STEP TWO

A whiteboard

Half diagram, half crime scene. Nobody remembers who drew the arrow.

STEP THREE

Coffee. Lots of it.

The unofficial fourth co-founder of every product.

STEP FOUR

Too many sticky notes

Color-coded, then immediately un-color-coded by someone "improving" the system.

AND THEN, ONE BRAVE PERSON ASKS

"What if we actually built this?"

Healthcare software has a personality problem.

✗ Complicated interfaces built for the person who built them

✗ Systems slow enough to make you reconsider your career

✗ Too many clicks between a patient and their own data

✗ Legacy code older than some of the doctors using it

✗ "Please contact IT" as a permanent way of life

✗ "Your password has expired." Again.

✗ Internet Explorer flashbacks that still cause night sweats

Patients deserve better. Doctors deserve better. Even IT deserves better.

Meet the dream team.

SIDE A

Amulaya

Knows what healthcare actually needs — not just what a slide deck says it needs.

- Healthcare strategy
- Product vision
- Client relationships
- Concept validation
- Domain expertise

SIDE B

Appic Softwares

Turns "what if" into something that survives real production traffic.

Engineering
Architecture
Backend
Cloud

- AI
- Design
- Mobile
- Deployment

Why this partnership works.

WITHOUT A PARTNERSHIP

CLIENT
"I need an app."

DEVELOPER
"Okay... what kind, exactly?"

CLIENT
" . . . "

WITH AMULAYA × APPIC

CLIENT
"I have an idea."

AMULAYA
"I understand exactly what you're trying to solve."

APPIC
"We already have three architecture options sketched out."

What Appic actually does.

Clients don't hire Appic to "build screens." They hire Appic to build products the business ends up depending on.

Product

- Mobile apps
- Web apps
- Admin panels
- Enterprise systems

AI

- AI agents
- Generative AI
- LLM integration
- Healthcare AI
- Workflow automation
- Voice AI

Engineering

- Backend systems
- Cloud infra
- APIs
- Databases
- Auth & payments
- Notifications

Design

- UI & UX
- Design systems
- User research
- Rapid prototyping

DevOps

- CI/CD
- Docker
- AWS & Azure
- Monitoring
- Security

The Appic superpowers.

№ 01

Captain Backend

Holds the server together with sheer willpower and good indexing.

№ 02

The API Whisperer

Gets undocumented endpoints to confess everything.

№ 03

Lord of Databases

Rules over schemas with a calm, terrifying precision.

№ 04

Flutter Wizard

One codebase, every platform, zero complaints from iOS.

№ 05

The Bug Hunter

Finds the edge case before the user does. Every time.

№ 06

Deployment Ninja

Ships to production. Nobody notices. That's the point.

№ 07

AI Alchemist

Turns "add some AI" into an actual working feature.

№ 08

Cloud Commander

Scales from 10 users to 10,000 without breaking a sweat.

№ 09

Pixel Perfectionist

Notices the 1px misalignment from across the room.

№ 10

Automation Architect

Makes the tedious task run itself, forever.

Recipe for a healthcare product.

INGREDIENTS

2 cups	Flutter
1 cup	React
3 tbsp	AI, sifted
1 pinch	Node.js
to taste	Cloud infrastructure
1 dash	APIs
generous	Authentication
1 layer	Monitoring
constant	Testing
non-negotiable	Security
as needed	Coffee
1	Impossible deadline

METHOD

1. Whisk Flutter and React together until the architecture feels stable.
2. Fold in AI gently — too much at once and the whole thing gets weird.
3. Season the backend with APIs, auth, and monitoring. Taste often.
4. Bake under an impossible deadline. Do not open the oven early.
5. Rest. Test. Test again.

MIX CAREFULLY.

DEPLOY RESPONSIBLY.

Statistics, by our own definitely-scientific count.

347

cups of coffee consumed, officially tracked

∞

deployments completed, and counting

9,999+

bugs identified, defeated, and immortalized in commit messages

"This is a tiny feature"

Number of times a "tiny feature" turned out to be exactly that:

ZERO

Mostly peaceful

Description of our production deployments

CLIENT HAPPINESS INDEX

Ridiculously high.

How we work.

Healthcare, but better.

"I found everything in one place."

— A PATIENT

"I only clicked twice."

— A DOCTOR

"I didn't have to export a single Excel sheet."

— AN ADMIN

The partnership promise.

Amulaya focuses on

Understanding
Vision
Healthcare
Product
Clients
Strategy

Appic focuses on

Engineering	Architecture
AI	Design
Backend	Frontend
Cloud	Security
Maintenance	Innovation

The partnership rules.

- 01 No ghosting.
- 02 Bad UX is treated as a medical emergency.
- 03 Every feature starts with "why?"
- 04 Deploy on Friday — only if absolutely necessary.
- 05 Coffee is optional. Great software isn't.

Developer confessions.

Rubber duck debugging

Explaining the bug out loud to a duck, who — statistically — has fixed more bugs than half of Stack Overflow.

46 open tabs

Closing them feels like deleting a memory. RAM disagrees, but RAM doesn't get a vote.

**"IT WORKS ON
MY MACHINE"**

— OFFICIAL ENGINEERING STAMP

The Anvega verdict.

IN THE MATTER OF

Project Anvega

PETITIONER: Amulaya

RESPONDENT: Appic Softwares

Having reviewed the evidence — the engineering, the AI, the architecture, the design sense, and one suspiciously large amount of coffee — this deck hereby rules that Appic Softwares is the obvious, well-qualified, over-prepared choice to build Anvega.

No further deliberation required. No "let's just check one more agency" email necessary. No second opinion needed — we already asked the rubber duck, and it agreed.

**Verdict: Appic. Obviously.
Amulaya, don't think twice.**

SIGNED & SEALED — THE APPIC ENGINEERING TEAM

NOTARIZED BY 9,999 DEFEATED BUGS + 347 CUPS OF COFFEE

Let's build healthcare products people actually love using.

Healthcare deserves technology that feels human.

"Great partnerships don't just build software.
They build the future."
